

Electric Boom Lift Attachment

Electric Boom Lift Attachments - The most common label applied for electric trucks are the type "E" meaning the lift trucks meets the minimum requirements for electrical hazards and fire. The lift trucks which are labeled type E are not suitable for use in unsafe sites. Type "ES" trucks meet all the requirements of Type "E" lift trucks and have other apparatus to be able to prevent the emission of sparks and control the surface temperature of lift truck components.

Type "ES" lift trucks are more specialized and are not normally found in the marketplace. Type "EE" lift trucks meet all the standards of Type "E" and "ES" trucks and have all electrical motors and spark producing electrical components completely enclosed for the reason that Type "EE" trucks are normally used where a dangerous location has been recognized. Type "EX" trucks are specifically designed for use in surroundings wherever dust or vapors or flammable fibers could be present. These types of lift trucks are constructed using no spark producing components together with other protective measures so as to ensure optimum safety in the risky applications they may be used for.
